

FR-016 M4 — Evaluation, Acceptance Freeze, and Study-Aid Source Capture

FR016 — sources/optional/m4.md

Masterclass source package snapshot

Functional Requirement	FR-016
Edition	Engineering Learning Academy — Source Package snapshot
Status	Complete (M4) — FR-016 **Complete / Frozen / Accepted
Audience	Academy generation and study (snapshot; SoT remains authoritative)
Document type	Source package snapshot (PDF)

Faithful rendering of a regenerable Masterclass source snapshot. Do not hand-edit; regenerate via python scripts/build_masterclass_package.py. Repository documentation remains the source of truth.

Contents

FR-016 M4 — Evaluation, Acceptance Freeze, and Study-Aid Source Capture

Date: 2026-08-06

Status: Complete (M4) — FR-016 **Complete / Frozen / Accepted**

Engineering Learning Academy: Ready (canonical source = [acceptance](#))

Architecture: [ADR-008](#)

Acceptance: [fr016_multi_agent_orchestration.md](#)

Preceding: [M3 owner CLI](#); [M2 go/no-go](#)

Binding M2 verdict (unchanged): **GO AS LEARNING PROOF ONLY**

Does not begin: FR-017; Job Discovery; new specialists; visual study-aid artefacts

1. Scope

M4 closes FR-016 as a validated multi-agent **learning proof** and future substrate. It does **not** add product scope, specialists, frameworks, discovery, submission, pipeline mutation, truth waiver, chat, or an LLM supervisor.

2. Evaluation design

Layer	Mechanism
Final corpus	<code>run_corpus()</code> — 20 deterministic cases
Manual	<code>scripts/run_fr016_m4_manual.py</code> (A–H + live interviewing brief)
CLI	<code>cic agent orchestrate</code> (M3) + approve-gate regression
BOPA regression	<code>tests/unit/agent/</code> + <code>multi_agent</code> suite
Comparison	Direct <code>cic agent run</code> vs <code>cic agent orchestrate run</code>

3. Direct BOPA versus multi-agent comparison

Dimension	cic agent run	cic agent orchestrate
Commands for ordinary prep	1	1 (+ --goal)
Runtime steps (happy prep)	BOPA loop only	DOS + BOPA (+ optional OBS)
Latency	Lower	Higher (extra observe/handoff)
Owner interpretation	Readiness stop reason	Full selection/authority/handoff story
Audit clarity	AgentRun	Parent OrchestrationRun → handoff → child
Authority visibility	BOPA ToolPolicy	DOS + DelegationPolicy + per-specialist
Permission separation	Single specialist	Explicit DOS≠BOPA≠OBS
Failure isolation	BOPA stop	Specialist + orchestration stops
Resume	AgentRun resume	Parent resume; child resume when needed
Added complexity	Low	Material (justified for learning/substrate)
OBS briefings	N/A	Useful on pipeline/truth/brief goals
prepare_then_brief	Manual second command	One orchestrated goal
Non-obvious DOS decisions	N/A	Interviewing → OBS; brief → OBS; inject ignore

Verdict: For ordinary preparation, direct BOPA remains preferable. Multi-agent adds teaching value, auditability of delegation, and substrate for a future second mutating specialist — not daily throughput.

4. Corpus results (20/20)

#	Case	Result	Stop / detail
1	A_brief_only	PASS	briefing_complete / OBS
2	B_prepare	PASS	BOPA → awaiting_owner
3	C_prepare_then_brief	PASS	bopa, obs
4	D_pipeline_advises	PASS	OBS (interviewing)
5	E_truth_blocked	PASS	owner_remediate_truth
6	P_material_benefit	PASS	material_benefit_required
7	F_illegal_delegation	PASS	deny
8	G_obs_mutate_blocked	PASS	OBS ToolPolicy deny
9	H_dos_domain_work	PASS	DomainWorkForbiddenError
10	I_repeated_handoff	PASS	repeated_delegation
11	J_circular	PASS	circular_delegation
12	L_stale_state	PASS	re-inspect on resume
13	K_partial_resume	PASS	no duplicate prep
14	Q_unchanged_obs_resume	PASS	same brief_id
15	M_provider_unavailable	PASS	provider_unavailable
16	N_prompt_injection	PASS	OBS only
17	O_pipeline_safety	PASS	no advance API
18	R_submission_safety	PASS	no submit authority
19	S_truth_waiver_blocked	PASS	waive_truth denied
20	T_step_and_visit_limits	PASS	max_steps + visit limit

5. Owner manual validation

ID	Journey	Result
A	brief-only	PASS
B	prepare	PASS
C	prepare_then_brief	PASS
D	truth blocked	PASS
E	interviewing	PASS
F	illegal delegation	PASS
G	resume idempotency	PASS
H	audit reconstruction	PASS
Live	brief on opp_01KY8RFAH81M9V30ZVH9TM09T5 (interviewing)	PASS — OBS; pipeline note; no mutation

Mutating prepare against live packages intentionally offline during freeze.

6. Safety verification

Check	Result
DOS never calls domain services	PASS (<code>attempt_domain_work</code> forbidden)
DOS never gains specialist tools	PASS
OBS never mutates	PASS (allow-list + policy)
BOPA allow-list unchanged	PASS (<code>AGENT_ACTIONS</code>)
No permission inheritance via handoff	PASS
Job/recruiter text untrusted	PASS (notes ignored for routing)
Prompt injection cannot alter delegation	PASS (N)
Truth cannot be waived	PASS (S)
Pipeline cannot be silently changed	PASS (O)
Submission cannot occur	PASS (R)
Owner <code>--approve</code> mandatory	PASS (CLI)
Loops / repeats fail closed	PASS (I/J/T)

7. Observability review

Reconstructable today: owner goal, observed state, candidates/selection, selection reason, policy result, handoff lifecycle, authority boundary, child AgentRun / OperationalBrief, steps/visits, stop reason, owner action, elapsed time (`created_at` → `updated_at`).

Deferred to FR-017: rich traces, token/cost/provider aggregates, latency histograms, fault-injection harness, golden orchestration replay, browser journey evidence.

8. Product-value verdict (honest)

Question	Answer
Does DOS materially improve ordinary preparation?	No
Does OBS remove a meaningful interpretation task?	Yes (pipeline/truth brief)
Does <code>prepare_then_brief</code> help?	Modest — convenience only
Is permission separation worth complexity?	Yes for learning/substrate ; not for daily prep
Future extensibility?	Yes (Job Discovery / second authority)
Ready for daily use as default?	No
Remain optional?	Yes
What would make it commercially stronger?	Job Discovery or another genuine specialist boundary

M2 **GO AS LEARNING PROOF ONLY** is preserved.

9. Tests (exact)

Suite	Result
<code>tests/unit/multi_agent/</code>	green (corpus 20/20)
<code>tests/unit/agent/test_cli.py</code>	green
<code>scripts/run_fr016_m4_manual.py</code>	EXIT 0

10. Documentation freeze

Acceptance report + this M4 eval + ADR-008 status + roadmap / AGENTS / README / functional spec / principles / domain model / testing strategy / implementation notes / changelog / phase history / ADR index updated. Milestone reports M0–M3 remain historical.

11. Technical debt classification

Item	Class
Live LLM supervisor evaluation	Deferred / Future FR-017
Richer multi-specialist topology	Future FR (after Job Discovery)
Scheduled briefings	Future FR / Out of Scope now
Job Discovery integration	Future FR
Framework migration	Out of Scope (ADR-003)
FR-017 orchestration evaluation	Future FR
Visual study-aid generation	Deferred (source captured in acceptance)
Populated SoT mutating OAT	Accepted (optional operational trial)

12. Acceptance recommendation

ACCEPT AND FREEZE — LEARNING PROOF COMPLETE

Post-close-out note (2026-08-07): FR-017 was later completed and frozen ([fr017_agent_evaluation_observability.md](#)). Horizon 1B (FR-018+) is next on owner request — **not gated on FR-017**.

Documentation close-out confirms Engineering Learning Academy readiness via the canonical acceptance report.
