

ADR-010: Opportunity Discovery Ingress Boundary

FR018 — `sources/adr.md`

Masterclass source package snapshot

Functional Requirement	FR-018
Edition	Engineering Learning Academy — Source Package snapshot
Status	Accepted (FR-018 M1; **FR-018 Complete / Frozen** — M4 live close-out)
Audience	Academy generation and study (snapshot; SoT remains authoritative)
Document type	Source package snapshot (PDF)

Faithful rendering of a regenerable Masterclass source snapshot. Do not hand-edit; regenerate via `python scripts/build_masterclass_package.py`. Repository documentation remains the source of truth.

ADR-010: Opportunity Discovery Ingress Boundary

Status: Accepted (FR-018 M1; **FR-018 Complete / Frozen** — M4 live close-out)

Date: 2026-08-07

Related: [ADR-003](#), [ADR-004](#), [FR-018 acceptance](#), [FR-018 M0](#), [FR-018 M1](#)

Context

Horizon 1A is frozen. Acquisition today is paste/export via `AcquisitionAdapter` into `ApplicationWorkflowRunner`. FR-018 must scale lawful inflow without redesigning the runner, Opportunity SoT, or FR-009 duplicates.

M0 accepted a **thin Discovery Ingress** and **URL-first** first executable path. M1 freezes production contracts and authority boundaries before any fetch/CLI.

Decision

1. **Discovery Ingress is a thin coordinator only.** It may resolve `OpportunitySource` values, instantiate `AcquisitionAdapter` implementations, invoke existing `ApplicationWorkflowRunner.start`, and optionally read Opportunities for definite-identity idempotent skip. It must not rank, assess, own persistence, generate documents, submit, or replace FR-009 duplicate confirmation.
2. **Opportunity remains the only durable business record.** `OpportunitySource` is transient ingress metadata and must never become a second catalogue.
3. **Reuse FR-008 acquisition contracts.** `AcquisitionAdapter` / `AcquisitionResult` remain the handoff into `AcquireNode`. FR-018 does not widen the adapter Protocol to batch acquire.
4. **URL-first scope for the first executable milestone after M1.** Email, feeds, APIs, scheduling, and Playwright remain out of M1 contracts enforcement (`DiscoverySourceKind` / M1 allow-list is `url` only).
5. **Provenance for URL path is fail-closed.** URL `AcquisitionResult` values must carry `source_kind="url"`, `source_url`, `source_identifier`, and `acquired_at` so FR-009 identity facets can derive.

Consequences

- Positive: Extends frozen Horizon 1A without a second orchestration engine.
- Positive: Clear Academy-ready authority story (ingress vs runner vs SoT).
- Negative: Volume acquisition (email alerts) waits for a later milestone.
- Negative: JS-heavy pages may fail URL fetch later — paste/export remains fallback.

Alternatives considered

Alternative	Verdict
Fat discovery orchestrator (analyse inside ingress)	Rejected — reopens FR-008
Parallel “seen jobs” store	Rejected — ADR-004 dual SoT
Widen <code>AcquisitionAdapter.acquire_many</code>	Rejected — runner churn
Email-first contracts in M1	Rejected — larger surface; deferred
No ADR (rely on ADR-003 alone)	Rejected — ingress authority needs explicit record

Notes

Does not amend ADR-003 runner design or ADR-004 Opportunity SoT. Amends product sequencing only by naming the FR-018 ingress boundary.

M2 implementation (2026-08-07): Executable `ThinDiscoveryIngress` + `UrlAcquisitionAdapter` delivered under [eval/fr018_m2_url_discovery_ingress.md](#) (**GO WITH REVISED SCOPE** — fixture-proven; live board HTTP may fail closed). Authority boundaries in this ADR remain binding.

M3 implementation (2026-08-07): Production hardening — [eval/fr018_m3_production_hardening.md](#) (**GO WITH REVISED SCOPE**). SEEK live URL path production-ready with OS trust store TLS (`truststore.SSLContext`). LinkedIn/Indeed remain attempt/fail-closed. Ingress authority in this ADR unchanged.

M4 implementation (2026-08-07): Email job-alert channel — [eval/fr018_m4_email_job_alert_acquisition.md](#) (**Accepted**). `DiscoverySourceKind` includes “email”; owner-supplied `.eml` digests expand to one acquire per job URL; ingress remains thin; no IMAP / recruiter CRM. **Live acceptance refinement:** LinkedIn alert bodies are discovery cards; `EmailAcquisitionAdapter` optionally enriches via existing `UrlAcquisitionAdapter` (fail-soft; provenance stays `source_kind=email`). Authority in this ADR unchanged.

FR close-out (2026-08-07): FR-018 **Complete / Frozen / Accepted** — [eval/fr018_opportunity_discovery_acquisition.md](#). Academy: [masterclass/FR018/](#). Next: FR-019 on owner request.
